

ACO Marine Product Catalogue

ACO pipe stainless steel pipework systems

ACO. creating the future of drainage

The ACO System Chain provides Drainage Solutions for tomorrows Environment.

Stricter rules and regulations on board worldwide operating ships require more sophisticated drainage concepts. ACO provides intelligent solutions which perform in two directions. They protect the humans from the water and vice versa. Every ACO product provides within the ACO System Chain the way to economically and ecologically recycle and re-use the water. Within the ACO Group, ACO Marine provides technical solutions for all kinds of ships in the world wide operating maritime industry, from new builds, refits to conversion ship yards.

collect:

Collection and storage

- Scuppers and Channels
- Stainless Steel push fit ACO pipes
- Galvanised GM-X® push fit pipes
- Black water vacuum pump station
- Grey and black water transfer stations
- Stainless steel waste water collection tanks up to 350m³

clean:

Separation and Treatment

- Grease traps and Biological grease traps
- Grease Separators
- Maripur® advanced waste water treatment system
- Clarimar® biological waste water treatment

hold:

Storage and Buffer

- Sludge holding tank
- Aeration systems
- Stainless Steel water tanks
- Disinfection systems for clean water tanks

release:

Discharge

- Clean water lifting and transfer stations
- UV/CI stations

Grease Separation

Push Fit pipe Systems

Sewage Treatment Systems

ACO Marine

ACO Marine is within the ACO Group the world wide contact for advanced onboard drainage and innovative waste water treatment systems. Mega Yachts, Cruise Vessels, Ferries, Military Ships, Offshore Platforms and all kinds of Cargo Vessels are equipped and sailing with system solutions, provided by ACO Marine. This includes the advanced waste water treatment system ACO Maripur® and the biological waste water treatment ACO und Clarimar® as well as stainless steel bioreactors up to 350 m³, fresh water tanks, drainage systems including scuppers, penetrations, and ACO Push-Fit pipes, made of stainless steel or galvanized carbon steel.

With its innovative technology and know-how, ACO helps to keep the ocean clean for the next generations.

General introduction

Introduction

ACO PIPE is reliable, lightweight and durable push-fit pipe work system, designed, produced and tested for soil, waste, rainwater and industrial wastewater drainage applications as well as for maritime waste water drainage and vacuum toilet systems.

Together with the other products of ACO Group it creates a perfect system and offers a sustainable drainage solution with unique advantages to the customers. Especially with the ACO gully and ACO stainless steel channel systems provide a unique system for building drainage. The push-fit system ensures quick and easy assembly for a reliable installation for gravity and vacuum drainage.

All ACO pipe interconnecting seals and fittings incorporate a unique double sealing system providing a trouble-free, reliable sealing system – every time.

The wide range of fittings available utilizes advanced cold forming techniques, thereby reducing the manufacturing cost and minimizing the amount of welded components, to provide the ultimate in system reliability.

Stainless steel pipe systems are particularly suited to applications subject to thermal shock.

Applications

Typical applications for ACO pipe systems include:

Marine applications in new ships building and repairs focused on

- Cruise ships
- Ferries
- Super yachts
- Offshores
- Cargo ships

Segment of ACO pipe marine applications is covered by company ACO Marine and their materials (www.acomarine.com).

Key features & benefits

ACO pipe stainless steel pipe work systems offer all the key features found in traditional metal waste water systems but with the additional benefits unique to stainless steel material and the push-fit system.

Easy Installation

For connection of pipes within the ACO pipe systems our unique push-fit system is used. It allows very easy pipe connection on site without the use of special tools, or machines or equipment. Installation is therefore very quick and cost effective.

System solution

More than 1,500 different types are available (straight pipes, bends, branches, diameter increasers and reducer's) together with a wide range of accessories this creates a complex and complete system for pipe works construction – the ACO pipe systems.

Certification

ACO pipe stainless steel pipe work systems are designed, manufactured, tested and checked under all required standards. pipe systems are tested for pressure, vacuum, noise, fire and tightness. ACO has for ACO pipe systems all important certificates to declare production quality, product resistance and conformity upon request.

Durability

The use of modern technologies, high quality materials and outstanding surface treatment processes ensure that our products are highly resistant to external environmental influences. The expected service life cycle exceeds 50 years.

Hygiene

Smooth welding, surface quality and full pickle-passivation of all stainless steel products within the ACO pipe systems ensure the prevention of corrosion and allows easy cleaning.

ACO Marine Stainless Steel pipe

General introduction

ACO pipe material information

ACO pipe stainless steel pipe work systems are manufactured from austenitic stainless steel in grades 304 and 316L. All products are chemically pickled and passivated for optimum durability and corrosion resistance.

Surface treatment by means of electropolishing or warrnishing is available. Recognized for long service and its easily cleaned characteristics, stainless steel's hard, smooth surface provides efficient flow for water and waste products.

ACO pipe sockets are fitted with EPDM seals as standard for regular drainage applications. For particularly aggressive chemical applications, 316L grade stainless steel with Viton® seals can be specific for the ultimate in system security.

Push-fit connection

Very reliable for vacuum and gravity piping system.

ACO PIPE double lip seal secure for the ultimate system reliability. Unique and sophisticated design of the lips and cavities gives ACO PIPE full tight construction.

Push-fit advantages

- Easy to assemble
- Time saving
- Cost saving
- Tight connection

Sound

- Comparison of two pipe work systems
 - ACO pipe – DN 110
 - HT system – DN 110
 - Simulation of water fall from 1st floor through ground floor to basement of house
- SS has better results in comparison with cast iron comparable to all other materials

Fire resistance

ACO pipe push-fit system is classified and certified as non-combustible product (as it is manufactured in compliance to EN 1124, part 1 & part 2). That standard classifies the ACO pipe systems as class A1 fire resistant (highest rating).

ACO pipe systems are certified also by SITAC authority as fire resistant (cert. no. 0410-01).

Special certificate of fire resistance for coated pipes (no. CSI PK-08-027) is available

Fire certificates from marine authorities (DNV, ABS) available

- Non combustible
- No additional fire collars needed at installation
- No toxic fumes emitted in case of fire
- EN 1124, SITAC, CSI, DNV and ABS fire certification available

Standards & certificates

Reference standards

ACO pipe stainless steel pipe work systems are designed, manufactured, tested and checked under the standards EN 1124-1 and EN 1124-2 pipes and fittings of longitudinally welded stainless steel pipes with spigot and socket for waste water systems.

The following standards will assist the designer to select the correct size of pipe system for the particular application.

EN 12056 gravity drainage systems.
EN 752 drain and sewer systems.

Testing

ACO PIPE stainless steel pipe systems are tested for the following points:

- Pressure & vacuum
- Noise
- Fire
- Tightness

Certificates quality & approval:

- ISO 9001
- ABS
- DNV
- Lloyd's Register
- SZÚ
- Bureau Veritas
- ETA
- Watermark

Resistance:

- Sitac
- CSI

Transport & handling

ACO pipe straight pipes are packed on pallets with wood frame and inserts, protected by cardboard and stretch foil. Fittings are packed in cardboard boxes and stacked on pallets. It is strongly recommended to transport and store the pipes and fittings in their original packaging to

avoid their damage. pipes should be stored and supported on a flat surface to avoid deformation.

Handle the pipes and fittings with care. Any care less handling (like dumping off the truck...) can cause deformation or damage

to pipes. Contact with carbon steel can cause corrosion on the stainless steel.

Part numbers - family range

Features

- pipes and fittings are available in 40 mm, 50 mm, 75 mm, 110 mm, 125 mm, 160 mm, 200 mm and 250 mm external diameters
- Lengths from 0.15 meter up to 6 meter
- Available in 304 (1.4301) and 316 L (1.4404) grades of stainless steel
- Push-fit system for quick assembly
- Fully comply to EN 1124-1 and EN 1124-2
- EPDM and Viton® seals available
- Fully pickle passivated
- Certifications: ISO 9001, ABS, DNV, Lloyd's Register, SZÚ, Bureau Veritas, ETA, Sitac, CSI

Table 36

Note:

Repair couplings are used to aid a convenient repair to a damaged in-situ pipe. Unlike the standard straight coupling, there is no central registration to limit the insertion depth of the pipe. The repair coupling slides completely over a pipe joint and simply re-positioned to bridge the required pipe joint.

Installation tip:

Mark the final position of the repair coupling on the installed pipe system to ensure the coupling seals are positioned symmetrically about the pipe joint.

Installation guide

Generally

The following standards will assist designers select the correct size of pipe system for a particular application: EN 12056: gravity drainage systems inside buildings. EN 752: drain and sewer systems outside buildings. Installation should be in accordance with the manufacturer's recommendations but also EN 12056-2, EN 12056-3 and EN 752.

pipe cutting

If it is necessary to adapt or shorten pipe lengths then whatever tools are used, the cut must be square, clean and ready chamfered. Suitable cutters and whole cutter sets are available from ACO (see page 53).

pipe jointing

The assembly of pipe joints is quick and straightforward requiring only a light application of lubricant available from ACO to the chamfered pipe end. Ensure that the mating ends of the pipes and fittings are clean and free from contamination. Push-fit the pipe end into the socket but do not push fully home into the socket recess so as to allow for thermal expansion within the system.

Vertical pipe stacks

When designing a rainwater or soil and waste system, pipe work must be supported at not more than 2 meter centres and vertical pipes should be fixed to the wall not less than 30 mm to facilitate maintenance and painting. Allow at least one bracket per fitting preferably at the downstream end of the fitting with additional brackets at changes of direction or junction points.

pipe weights

Engineers should be aware of minimum and maximum weights when designing vertical stack and horizontal pipe run systems. Generally, when the pipe is completely full of water, then the vertical deflection of the pipe between brackets should not exceed 1.5 mm. The discretion of the installer should be applied in each instance to ensure that the pipe is adequately supported.

As a guide, use the table below for bracket spacing on horizontal pipes.

pipe diameter bracket spacing*

Pipe diameter [mm]	Length [m]
50	2.0
75	2.3
110	2.5
125	3.0
200	3.0

Horizontal pipe runs

Horizontal pipe work should be supported with at least two brackets per 3 meter pipe length. One bracket should be within 300 mm of the pipe joint and the other approximately at the midpoint of the pipe length, but not more than 2 metres from the next bracket. Additional brackets should be used at changes of direction and at junction points immediately downstream of the fitting. Horizontal pipe runs may be installed at a fall of 1 in 50 and feeder connections should be achieved using 45° branches. Where long pipe runs occur i.e. greater than 15 meters, a fixing arm should be attached to the bracket to prevent pendulum movement within the system.

ACO Marine Stainless Steel pipe Installation guide

Socket clamps

The ACO pipe socketed systems have push-fit socket joints and consequently they will not be able to resist internal pressure unless precautions are made to ensure that the joints will not slide apart.

Appropriate fixing to the structure can prevent the joints from sliding apart in most cases, but if it is difficult or impossible to fix the pipes to the structure, the socket clamps (page 46) and pressure peak clamps can prevent the push-fit sockets and spigot ends from sliding apart if the system is overloaded or internal pressure is generated.

Working pressure

The ACO pipe socketed stainless steel pipe systems are fitted with a unique, double lip seal manufactured from either EPDM or Viton®.

The double lip seal arrangement provides added security for the ultimate long term reliability. The ACO pipe; socketed stainless steel pipe systems are tested and approved for operating pressures in gravity, siphonic and vacuum systems.

ACO pipe stainless steel pipe systems are designed for maximum working pressure 0.5 bar according to EN 1124. In case where higher pressure may apply, it is necessary to combine the system with socket clamps.

Vacuum applications

Pipe diameter [mm]	Max. pressure [bar]
40	-0.8
50	-0.8
75	-0.8
110	-0.8
125	-0.8
160	-0.8
200	-0.8
250	-0.8

Pipe diameter [mm]	Max. pressure [bar]
50	8.0
75	8.0
110	8.0

Table 87

ACO pipe material information

Thermal movement

ACO pipe stainless steel pipe work systems have a low coefficient of thermal expansion, of approximately 1 in 1000 mm per 60 °C of temperature change.

The requirement for thermal tolerance on pipe systems is otherwise confined to hot water conditions. A comparison of approximate thermal movement between different pipe materials in mm per metre with a temperature change of 60 °C is given below.

- Aluminium alloy 1.44 mm
- Copper 0.98 mm
- Grey cast iron 0.75 mm
- HDPE 9.0 mm
- PVCu 3.0 mm
- Stainless steel 0.99 mm

Material	Coefficient of linear expansion [$10^{-6}K^{-1}$]
Aluminium	24.0
Copper	16.4
Grey cast iron	12.5
HDPE	150.0
PVCu	50.0
Stainless steel	16.5

Table 88

Pipe weights

ACO pipe thin-wall stainless steel pipe systems are light in weight and high on performance with clear advantages in ease of handling and savings in labour costs over traditional metal pipe systems.

Engineers will need to know weights and loading when designing vertical stack and horizontal pipe run systems. The table below gives weights for all pipe sizes empty and full of water.

pipe diameter [mm]	pipe weight Empty [kg/m]	pipe weight full (water) [kg/m]
50	1.2	3.0
75	1.8	6.9
110	2.7	11.9
125	3.3	15.8
160	5.0	24.6
200	7.5	38.0

Table 89

Coefficients of linear expansion (α) for various materials are as follows:

Thermal expansion

Sealing materials

Seal material information

The ACO pipe socketed stainless steel pipe systems are fitted with a unique, double lip seal manufactured from either EPDM, NBR or Viton®. The double lip seal arrangement provides added security for the ultimate in long term reliability.

EPDM (ethylene propylene diene monomer)

Black sealing rubber ring which is suitable for most applications where there are no oil or petrol residues in the waste water.

NBR (nitril butan rubber)

Black sealing rubber ring is suitable for waste water applications where there are petrol or oil residues. NBR is not resistant to solvents and high temperatures.

FPM (fluorelastomer) – Viton®

Green sealing rubber ring is suitable for special applications where oil, solvents and strong acids are present in waste water and for applications with higher temperatures. Viton® seal has limited resistance to chemicals like acetone, methyl alcohol.

To be sure of suitability for special applications please consult exact seal material features within ACO installation guide.

Rubber type	EPDM	NBR	FPM (Viton)
Colour	black	black	green
Temperature range	-50 / +130 / +150 °C	-30 / +80 / +100 °C	-20 / +200 / +300 °C
Resistance			
Water	excellent	good	good
Chemicals			
Acids	good	fair	excellent
Bases	good	fair	excellent
Benzene/Petrol	unsatisfied	excellent	excellent
Oils			
ASTM Oil No. 1	unsatisfied	excellent	excellent
ASTM Oil No. 3	unsatisfied	excellent	excellent
Ozone & weather stresses	good	limited	good

* Table 90

Viton® is a registered trademark for fluorelastomer by DuPont Performance Elastomers L.L.C.

Please contact ACO in case of any doubts regarding this topic.

Care and maintenance

Cleaning methods

Stainless steel is easy to clean. Washing with soap or a mild detergent and warm water followed by a clear water rinse is usually quite adequate for many applications. An enhanced aesthetic appearance will be achieved if the cleaned surface is finally wiped dry.

Precautions

If all the suggestions and actions in the table below have been attempted, stainless steel has the facility to be mechanically cleaned by specialists on site. Please contact ACO Industries for further assistance.

Problem	Cleaning agent	Comment
Routine cleaning, all finishes.	Soap or mild detergent and water (such as washing up liquid).	Sponge, rinse with clean water, wipe dry if necessary.
Fingerprints, all finishes.	Soap or warm water or organic solvent (e.g. acetone, alcohol).	Rinse with clean water, wipe dry if necessary.
Stubborn stains and discolouration.	Mild cleaning solutions (e.g. Jif, Goddard stainless steel care).	Rinse well with clean water and wipe dry.
Oil and grease marks, all finishes.	Organic solvents (e.g. acetone, alcohol, trichlorethylene).	Clean after with soap and water, rinse with clean water and dry.
Rust and other corrosion products.	Oxalic acid. The cleaning solution should be applied with a swab and allowed to stand for 15–20 minutes before being washed away with water. May continue using Jif to give final clean.	Rinse well with clean water (precautions for acid cleaners should be observed).
Scratches on brush (satin) finish.	Household synthetic fibre scouring pads (e.g. Scotch Brite fibre pad). For deeper scratches; apply in direction of polishing. The clean with soap or detergent as per routine cleaning.	Do not use ordinary steel wool (iron particles can become embedded in stainless steel and cause further surface problems).

Table 92

Note:

Concentration levels and length of exposure have a direct influence on the resistance of stainless steel to certain chemicals. Each application should therefore be carefully reviewed to determine the suitability of stainless steel.
